

Avantopool filtering package

The optional filtering package protects the cooling unit (APCU032) from dirt particles and also keeps them away from the water circulation. The filter housing comes with hoses and connectors pre-attached, ball valves and quick connectors. Package also includes one filter inside the housing and 4 extra filters.

Filters must be cleaned at least on weekly basis. Dirty filter will compromise the water flow. Also, cleaning the filter regularly makes it last longer. We recommend changing the filter every 1-3 months depending on the use of the pool.

Description

Filter housing

10" filter housing for 10x4,5" filter cartridges, head with brass insert, clear body, hoses with connectors and two ball valves pre-attached. Comes with a wrench for easy detaching of the end cap.

Filter
